Summa ED3L Series

AC Servo System

Summa ED3L Serial Servo Drive

PROFINET Servo

50W~7.5kW

Servo with STO function(EC)

50W~7.5kW

Dual axis servo (EC/PTO)

400W
1kW

ED3L single axis servo (EC/PTO)

50W~7.5kW

Linear Motor servo(EC)

400W
1kW

EC: EtherCAT
PTO: Pulse/direction
STO: Safety torque off

ED3L PN Servo Drive

Based on ED3L servo platform, support Profinet technology products

Support a variety of application Classes

- AC1: Open Loop Speed control (Message 1)
- AC3: Semi-closed loop position control(Message 111)
- AC4: Close loop speed control (Message 3/102/105+750)

Variety of messages are developed based on the above application classes:

- Standard telegram 1
- Standard telegram 3
- Siemens telegram 102
- Siemens telegram 105
- Siemens telegram 111
- Siemens auxiliary telegram 750

ED3L PN Servo Drive- Message 111

PLC through message 111 and TIA PortalV15.1 driver library Drivelib_TIA15.1_V522_sha512 SINA_POS (FB284) realizes basic positioning control, and its functions are as follows:

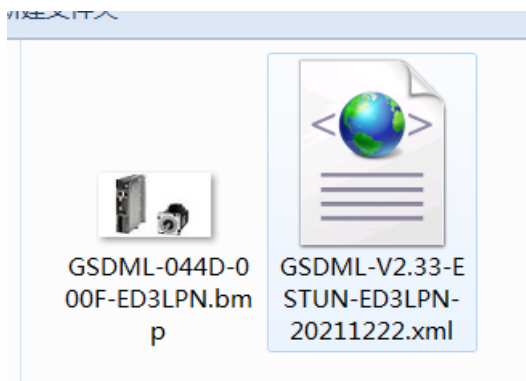

- Soft limit function
- Homing function
- Torque limit and R/W function
- Rel/Abs Position function
- Stop function
- Speed JOG function
- Continuous position given function

Operation mode supported:

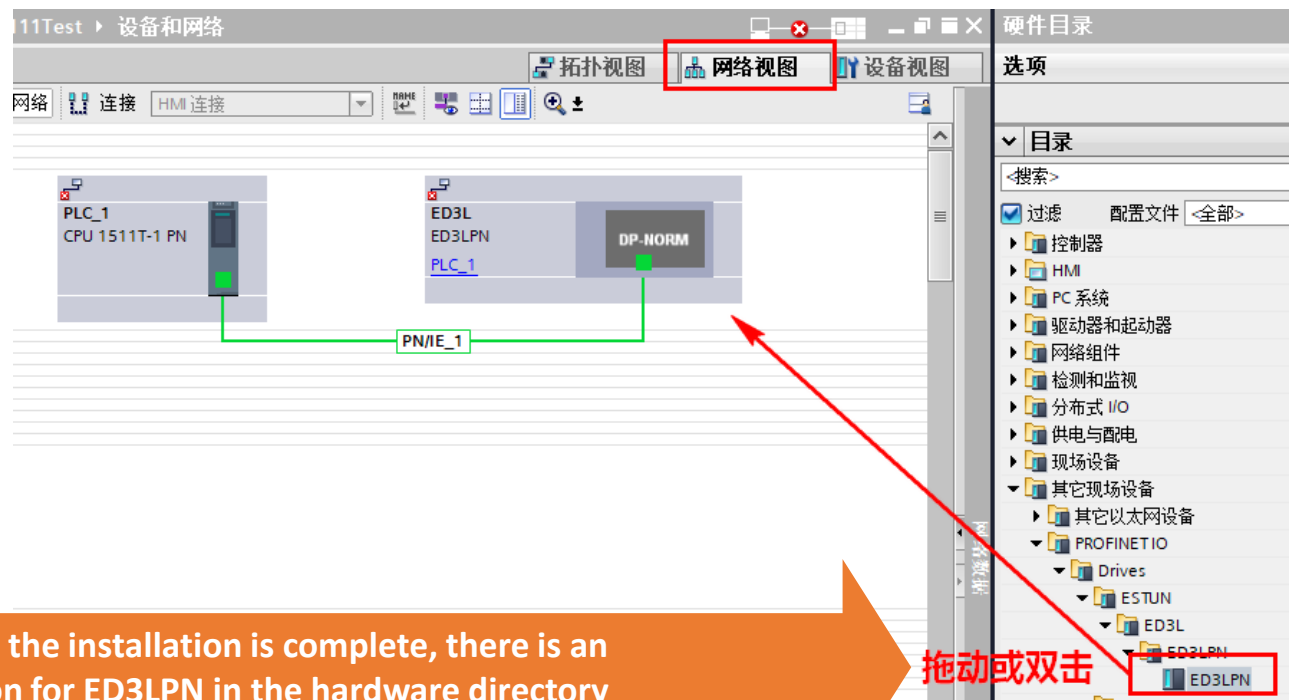

- 1 = Relative positioning (support)
- 2 = Absolute positioning (support)
- 3 = Positioning according to Settings (not support)
- 4 = Return to reference point (support)
- 5 = Set back to reference point position (support)
- 6 = Run program segment 0-15/63 (G120/S120) (not support)
- 7 = JOG(support)
- 8 = Increment JOG (not support)

ED3L PN Servo Debugging Steps

1. Copy the GSD file and the corresponding image to the local folder. The GSD file is shown in the following figure:

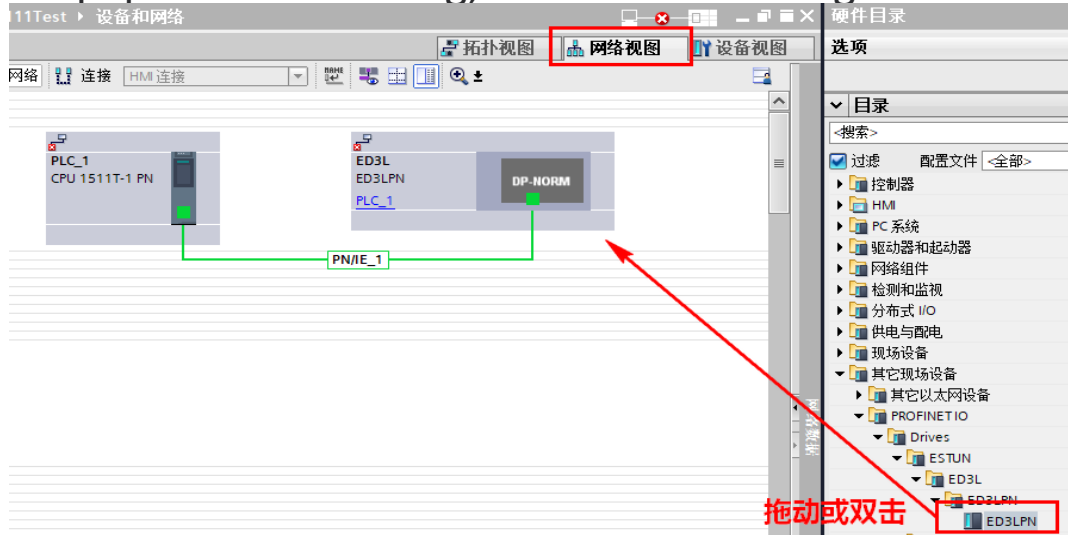

2. Install the GSD file in TIA software, as shown below:

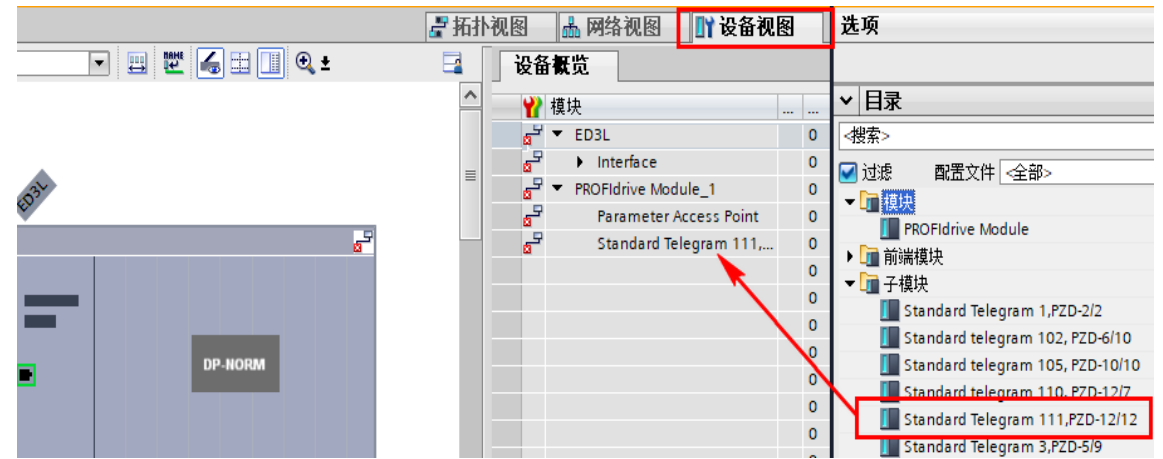

Once the installation is complete, there is an option for ED3LPN in the hardware directory

ED3L PN Servo Debugging Steps

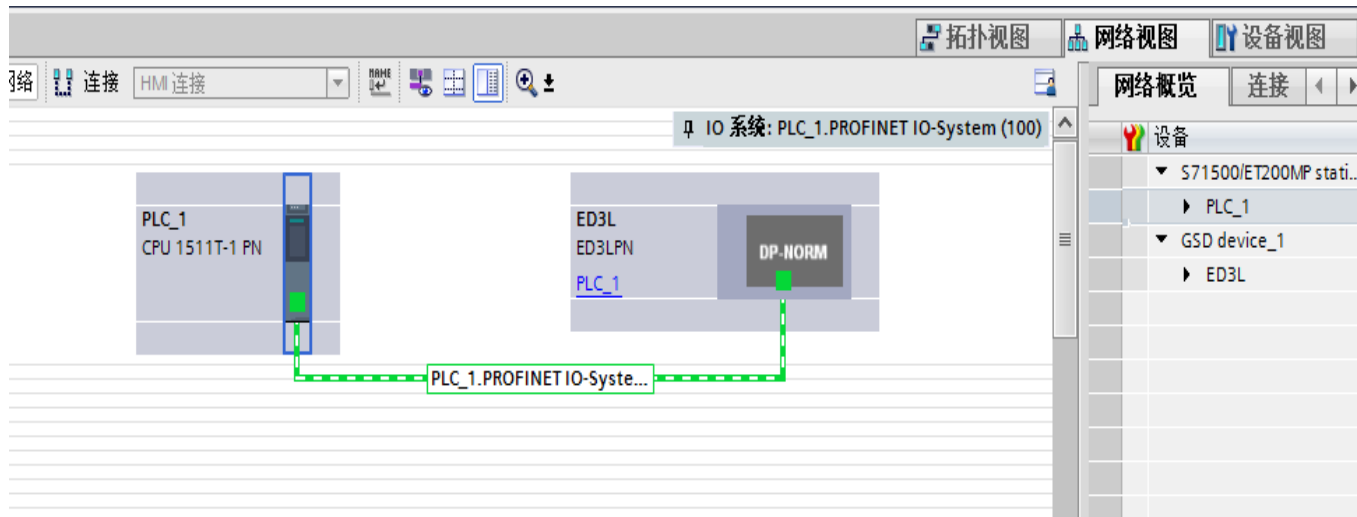

Configuration: Siemens PLC and ED3LPN servo are configured according to the equipment and wiring, as shown in the figure below:

Configuration: add message 111, as shown in the following figure

Configuration: Switch to network view and connect PLC with ED3LPN servo, as shown below

PN Servo Drive Configuration Steps

1

ED3L GSD file import to TIA

2

In network view, Siemens PLC and ED3L PN servo are connected

3

In the device view, add packets to each ED3L PN servo

4

Switch back to the network view and check whether the connection between Siemens PLC and ED3L PN is switched to a dashed line: PLC_1.PROFINET Io-SYS...

5

Add axis process object, configure servo parameters, configure mechanical parameters

PN Servo Drive Configuration Steps

6

Assign a device name and select online access to the PG/PC interface

7

Set the isochronous synchronization mode

8

Programming, add a motion control module, the axis process logic control

9

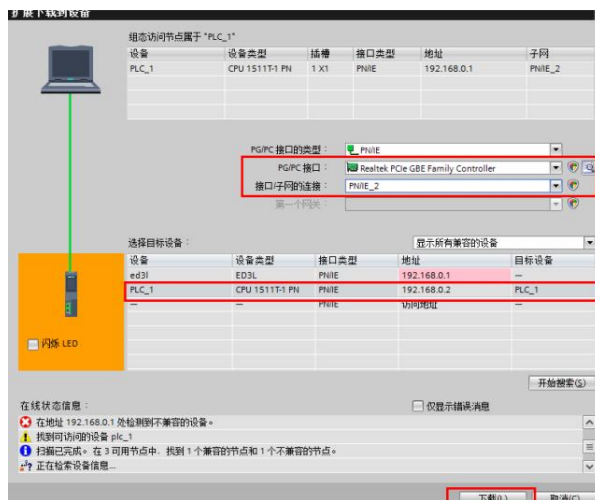

Project download:
Compile download

10

Test run:
Axis debugging

编程：在工程中添加运动控制模块，可进行轴工艺逻辑控制，如下图所示

ED3L PN Servo Functions

ED3L-PN Servo has the following outstanding features:

200VAC Power supply, Power range from 50W to 2KW

400VAC Power supply, Power range from 1KW to 7.5KW

PROFINET communication, support standard AC1/AC3/AC4/102/105/750/111message

Isochronous synchronizing cycle minimum is 500 μ s

Support 32 kinds of homing mode

Suitable for EM3A series, EM3G series, EM3J series servo motor. Motor assembly 17-bit incremental encoder

(magnetic), 17-bit absolute encoder (photoelectric), 20-bit incremental / 23-bit absolute encoder (photoelectric)
